

# Somerset Prostate Support Association

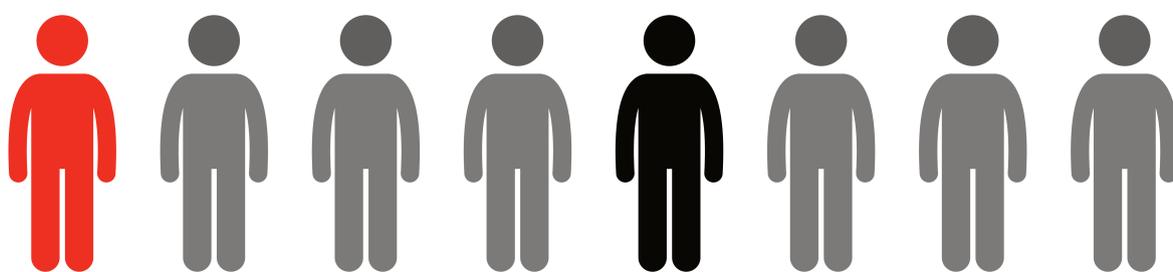

## Prostate Cancer Awareness

Be aware of what prostate cancer is, what the symptoms are, what action to take and that early testing & diagnosis saves lives,

## A Few Facts

- Prostate Cancer is the most commonly diagnosed cancer in the UK.
- Close to 50,000 men are diagnosed with the disease each year.
- The disease mainly affects men over 50 and those with a family history of PC.

One in eight men is likely to be diagnosed with with Prostate Cancer in their lifetime.

For black men the risk is one in four.

There is no national screening process for prostate cancer, but the Somerset Prostate Support Association works with local sponsors and donors to provide free PSA testing at various locations throughout the year.

The PSA test is a simple blood test, the results of which are sent directly to you.
